

1.

Use immediately after receipt.

2.

In the greenhouse, partly peel the lid off the top of the tray.

3.

Take one Mirical strip from the tray at a time.

Close the lid while walking to the next introduction point to prevent *Macrolophus* from escaping.

4.

Hang the folded cardboard strip over the stalk of a fully-grown leaf at the top of the plant.

Distribute the strips over 5-10 introduction points.

5.

Macrolophus will crawl out of the cardboard strips and spread through the crop.

6.

For optimal performance of Mirical, make sure to use Entofood to boost the population.

7.

Remove lid and allow the remaining *Macrolophus* to leave the tray.

8.

Recycle lid and cardboard tray.
Leave strips in the crop.
